**Abstract:**

The words “focused, rigorous, coherent” describe mathematics curricula, but are inadequate for describing what it *feels* like to teach or learn from such a curriculum. I will describe the Eureka Math Curriculum as an epic story that travels through: A Story of Units (PK-5), A Story of Ratios (6-8), A Story of Functions (9-12). Listen as we move through an extended, well-written, nonfiction, illustrated story. There will be ample time for Q&A included.

Scott Baldrige is the author and lead mathematician of the Eureka Math/EngageNY Curriculum. He earned his PhD. in mathematics from Michigan State University and previously held a faculty position at Indiana University before accepting a professorship in mathematics at Louisiana State University in 2004. The EngageNY/Eureka Math curriculum is currently being used in thousands of classrooms across the United States.
